

ABSTRACT

The present invention 10 discloses a tape dispenser having a plurality of spindles 26 that will hold various width tape rolls 14 within a housing 30 containing compartments for the tape rolls. The housing 30 is comprised of a rigid material having a plurality of grooves 28 on opposing walls of the housing for axially mounting spindles 26 holding tape rolls 14 therewith. There are serrated members 20 extending from the housing 30 enabling tape 14 to be sheared into any length needed. Cover 16 also has pivots 22 and a locking element 24.
